

# Command Enterprise Video Management Solutions

Centralized, Scalable, and Secure  
Video Operations. Available On-  
Premise or in the Cloud.

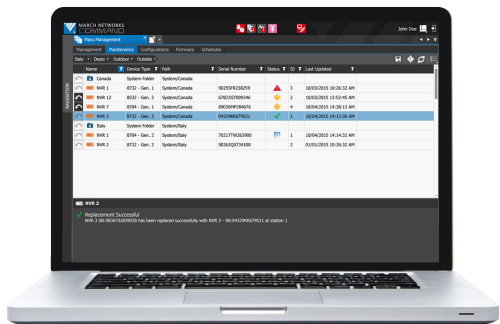

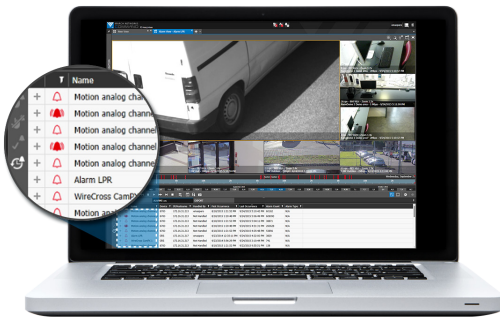

# Transforming Video Into Value

March Networks delivers a powerful suite of enterprise-grade video management solutions designed to help organizations reduce risk, streamline operations, and unlock business insights across distributed locations. Whether deployed on-premise or in the cloud, our platform provides a unified interface for managing cameras, recording infrastructure, alerts, and evidence. All with the security, performance, and reliability modern enterprises demand.

## KEY BENEFITS OF COMMAND ENTERPRISE SOLUTIONS

Whether you prefer the control of on-site infrastructure or the simplicity of a hosted platform, March Networks gives you a solution that grows with your business.

### Centralized Management

Monitor health, alarms, and video from a single interface across all sites.

### Operational Efficiency

Mass device updates, system health alerts, and centralized user administration reduces IT workload.

### Smart Search & Forensics

Quickly locate and export evidence with powerful search tools.

### Secure Access

Role-based permissions and audit trails protect sensitive video data.

### Third-Party Integration

Seamlessly integrate with access control, analytics, and business systems.

### Mobile-Ready

View cameras, playback, and investigate from desktop or mobile devices.

# Command Enterprise On-Premise

## Direct control. Enterprise-scale management.

March Networks Command Enterprise On-Premise centralizes video surveillance on your infrastructure using March Networks recording servers and edge devices. Ideal for organizations that require direct control of equipment, network architecture, and data residency, this solution scales from hundreds to thousands of cameras while delivering robust monitoring and administrative tools.

## WHAT ON-PREMISE DELIVERS

### Real-Time Health Monitoring:

Stay ahead of issues with proactive alerts & system insights.

### Mass Management:

Push firmware updates & configuration changes across devices in minutes.

### Centralized Administration:

Unified user roles, system configuration, & access control across all locations.

### Flexible Integration:

Support for third-party cameras, access control, & analytics.

### Secure, Local Deployment:

Keep sensitive video on-site with full infrastructure governance.

## TIERS

To ensure customers get the right capabilities for their environment, Command Enterprise On-Premise is available in two flexible tiers, allowing organizations to start with core functionality and expand as needed.

### ESSENTIAL

#### Core Enterprise Video Management

Delivers essential tools for day-to-day operations, system health, and investigations.

Alarm management & real-time health alerts

Video playback & export

Centralized user management & permissions

Device maintenance & camera/recorder mass management

Case management, tags & smart search with heatmaps

System dashboard, SSO & unified user management

Attribute search & third-party integration readiness

### PREMIUM

#### Advanced Security, Resilience & Operations

Builds on the Essential tier with enhanced capabilities for complex, high-security environments.

Central evidence archive

Transport-specific features

Advanced cybersecurity tools, including:

- Certificate management (802.1X)
- Certificate monitoring (HTTPS X.509)
- CyberArk integration
- Device password management

Organizations can select the tier that best fits their current requirements while avoiding unnecessary complexity. Both Essential and Premium customers can also add March Networks Cloud Services, enabling hybrid deployments and future expansion.

Command Enterprise On-Premise is the choice for enterprises seeking maximum control, predictable performance, and integration with existing IT ecosystems. It's suitable for industries like banking, transportation, retail, and hospitality where governance and data control are paramount.

# Command Enterprise Cloud

## Simplified Enterprise Video That's Hosted and Scalable

March Networks Command Enterprise Cloud brings enterprise-grade video management into a hosted, scalable environment. Eliminate the need for on-site servers and significantly reduce infrastructure costs while maintaining the power and flexibility required by distributed organizations. Cloud deployment enables remote access, streamlined operations, and rapid scalability.

## CLOUD ADVANTAGE HIGHLIGHTS

### Remote Access Everywhere:

View cameras, alarms, & system health from any location.

### No Server Hardware:

Cloud hosting reduces on-site infrastructure & maintenance.

### Rapid Scalability:

Easily expand coverage across new locations without hardware upgrades.

### Consistent User Experience:

Same powerful tools & dashboards as the on-premise premium tier, with added convenience.

### Optional Cloud Services:

Add extended storage, advanced analytics, & centralized archiving as needed.

Command Enterprise Cloud empowers organizations to centralize operations without the burden of hardware upkeep. It's ideal for multi-site businesses seeking agility, lower cost of ownership, and simplified management.
